

How much of the stated objective does the score actually pick?

overlap with top- m by exact $\langle g_i, g_t \rangle$

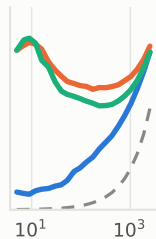

ConvNetBN/dog-bird

poison-set size m

- GRAFT (as implemented, beta=0)
- GRAFT+ (as implemented, beta=1)

ConvNetBN/frog-airplane

poison-set size m

- GRAFT+ with $R_i = \langle h_i, h_t \rangle$ (Alg. 1 as printed)
- random selection
